

Add Transcripts and Indexes to a Resource

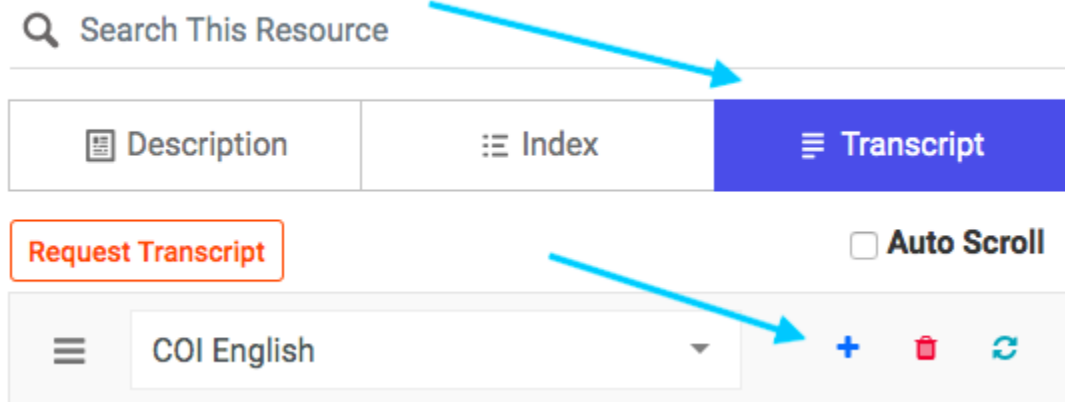

Add Indexes and Transcripts

To add indexes or transcripts to a resource, go to the resource detail page, click on the appropriate tab on the right sidebar and then click the small "+" button.

Note

When no transcripts or indexes are available for a resource, the tabs are not visible to public users. Only organization users and administrators can see them in this case.

Aviary accepts OHMS XML, WebVTT and plain text files for indexes and transcripts. On the next screen:

- Select your file for upload
- Enter a name to distinguish the index/transcript
- Select a language
- Indicate whether the index/transcript should be made public.

If you are uploading a Transcript using a WebVTT file you will see two additional options:

- Is Caption?: when enabled it uses the file for closed caption (CC option in the player)
- Ignore Title: when enable it ignores the "Title" attributes from your WebVTT if present (see the [WebVTT Format Website](#) for more details)

Click on "Upload Transcript/Index". The transcript or index is now loaded in the tab.

Transcript Upload

Select a transcript to associate to this file. Allowed formats: OHMS XML and WebVTT.

Select File sample-01-01-2018_0100.wav.vtt

Assign a Title to this transcript. Title will be used to differentiate multiple transcripts for a single file.

Sample Transcript

Transcript Language

English

Public?

No
