

Aviary Announcement - Sprint 23

Dear User,

Here is a list of the latest changes we implemented in Aviary during Sprint 23. These will be available on the site as of March 26, 2019.

New Features

- NEW MODULE: AUTOMATED TRANSCRIPTION!

Ability to create automated transcripts through Aviary (paid service that uses IBM Watson), including:

- Creation of transcription requests from Resource pages.
- Management of Transcription Jobs at the organization level.
- Seamless payment integration through provided credit card.

Enhancements

- ADVANCED SITE SEARCH enhancements, including:
 - Implementation of Boolean operators via the user interface.
 - Implementation of phrase search using quotation marks.
 - Implementation of "contains" argument using wildcard (*)
 - Improvement of look and feel.
- Replaced link to Collection and link to Organization from search results with link to the Resource page.
- Ability to change video quality from the player for a better viewing experience (when multiple qualities of files are available).
- Transcoding feature for videos larger than 2GB stored in Wasabi storage to ensure better viewing experience.

Fixes

- Fixed issue with general search terms when deleting the first term would delete others applied.
- Fixes issue with filters being cleared when clearing search terms.
- Fixed issue with WYSIWYG not working for click-through conditions for access.

Complete change log can be found in the [Aviary Knowledge Base](#).
